JKU AI · HACKATHON DEMO

Mates

the plan for JKU AI students, ready from your slides in one minute.

Hacktoberfest Hack Day Linz · Team [team name]

Built at MLH x Young AI Leaders Hacktoberfest Hack Day at JKU Linz.

Made with GAMMA

THE PROBLEM

Exam next week. 200 slides. Now what?

- Rereading and highlighting are low-utility study techniques
- It’s hard to see what you don’t know
- Cramming can feel productive, but retention fades

Made with GAMMA

THE OUTCOME

Walk into the exam knowing you’re ready

$$\text{Value} = \frac{\text{Dream outcome} \times \text{Likelihood of success}}{\text{Time} \times \text{Effort}}$$

A plan timed to your exam

Built on learning science

Upload once; know what’s next

Made with GAMMA

HOW IT WORKS

From course slides to a study plan

01

Onboarding

Exam date, hours, goals and preferred activities

02

Upload slides

AI turns your slides into a topic map

03

Space the plan

Study sessions planned backward from the exam

04

Quiz & adapt

Track weak topics and target the next session

Your course material. Your exam date. Your next session.

Made with GAMMA

WHY MATES

Six study problems, six solutions

Study problem	The mates solution
Where to start	Topic map from your slides
What don’t I know	Diagnostic quiz and weak-topic tracking
Cramming	Reviews spaced to exam date
AI gives answers	Hints first
Hate reading notes	Audio recaps and spoken quizzes
Cloud privacy	Local private mode

Made with GAMMA

THE EVIDENCE

Why it works: learning science

Self-testing

Supports learning more than passive review

Spaced practice

Supports retention

Hints before answers

Unguarded AI can harm later performance without AI

We deliberately don’t use “learning styles”: evidence does not support matching instruction to a learning style.

FUTURE PLANS

What’s next for mates

- Local agent to read KUSSS, MyJKU and Moodle
- Exam and course registration on your instruction

mates: study what works, not what feels like work.
